

## Antwerp 2020: 11th International Conference on Construction Grammar (ICCG11). Construction grammars in and between minds, communities, computers

<https://www.uantwerpen.be/en/conferences/construction-grammars/>

10-22 August 2020

University of Antwerp, Belgium

ICCG11 will cover a broad range of topics related to constructionist approaches to language. The conference also acts as a forum of discussion between approaches, including cognitive construction grammar, embodied construction grammar, fluid construction grammar, radical construction grammar, sign based construction grammar, frame semantics, or other approaches. The conference theme is: how do constructions model language in minds, communities, or computers? Submissions for presentations, posters, or workshops are particularly welcomed along the lines of this theme, but submissions may also be related to other aspects of constructionist linguistics.

### Confirmed plenary speakers

Nick Ellis (University of Michigan) – language learning

Luc Steels (Universitat Pompeu Fabra Barcelona) – computational linguistics

Evelina (Ev) Fedorenko (MIT) – neurolinguistics

Gabriele Diewald (Hannover University) – historical linguistics

Steffen Höder (Kiel University) – language contact
