Submission deadline: March 1, 2009

Held in conjunction with the Fourth International Conference on Meaning-Text Theory, this workshop aims at bringing together researchers interested in linguistic approaches — especially lexico-semantic aspects — to the description of terms. This workshop will provide an opportunity to discuss issues of a fundamental nature (e.g., the modelling of meaning or the definition of sets of lexical relationships) as well as applied work dealing with the acquisition of lexical aspects of terms or their representation in formal structures.

Topics

Use of lexical semantics models (e.g. Semantic Frames, Generative. Lexicon, Explanatory Combinatorial Lexicology, Functional-Lexematic Model) in terminological descriptions. Combination of concept-based and lexico-semantic approaches in terminological descriptions. Modelling of lexical relationships (paradigmatic and syntagmatic); specialized meaning, sense distinctions, argument structure, multilingual

terminological data. Implementation of lexical descriptions of terms in terminological databases, dictionaries, ontologies and other formal knowledge representations. Use of lexical descriptions of terms in computer applications. Automatic or semi-automatic identification of lexical relationships, collocations and other lexical aspects of terms in specialized corpora.

Submissions

Submissions, in English or French, should take the format of a short paper of no more than 10 pages in length. For format guidelines, please consult the Conference web site. An electronic ISBN publication of the Workshop proceedings is foreseen (papers will be published in General Conference Proceedings).
